

Met2Plastic Formed as MET Plastics Joins Dedienné Multiplasturgy® Group

Elk Grove Village, IL – As the newest member of the Dedienné Multiplasturgy® Group, MET Plastics has now officially become Met2Plastic, LLC. With the acquisition, both companies become transatlantic (USA and Europe), which provides a greater possibility to generate sales abroad.

“Dedienné is a forward-thinking plastic and composites processor,” said Mike Walter, President of Met2Plastic. “Joining forces with a like-minded business will help us both to flourish as we grow our operations in North America and in Europe.”

With a wide range of technologies and materials, Dedienné Multiplasturgy® Group has a bold footprint in the European manufacturing sector of highly technical components made of high performance polymers and composites. Established in 1947 in France, Dedienné today employs over 400 people, with plants in France (Normandy, Nantes, and Paris region) and in Romania, and sales offices in the UK and Germany.

From Dedienné’s perspective, Met2Plastic gives them access to the North American market with a reputable, profitable company with a customer base in the aerospace and medical fields. The capacity to produce in the USD zone and have a presence in the Chicago region are also beneficial to Dedienné.

For Met2Plastic, Dedienné provides access to an enhanced technology portfolio that positions the company for growth in metal to plastic conversion applications for its existing customer base and for new potential customers. The acquisition also provides Met2Plastic with increased size and capacity while ensuring all staff and leadership remain in place. As a member of Dedienné Multiplasturgy® Group, Met2Plastic will have access to European OEM’s with operations in North America. This presence in Europe, along with the ability to offer new material and plastic and composite process technologies, makes Met2Plastic a more dynamic organization.

“The new joint venture will be commercially and technically profitable for both companies,” said Pierre-Jean Leduc, President and CEO of Dedienné. “It’s also profitable for both management teams as this is a new human venture for both of us and is therefore very motivating.”

About Met2Plastic:

Operating since 1970, Met Plastics (now called Met2Plastic, LLC) is a premier custom injection molder and mold builder that is dedicated to being a single source solution provider for OEMs who require mission-critical components. We exceed customer expectations by producing complex injection molded plastic parts, providing total solutions, and unparalleled technical expertise. Met2Plastic is based in Elk Grove Village, IL, and is part of the Dedienné Multiplasturgy® Group.

About Dedienné Multiplasturgy Group:

Operating since 1947, Dedienné is a world-class, innovative technological partner. Dedienné combines its MULTIPLASTURGY® concept around the design and manufacturing of technical and cosmetic parts as well as sub-assemblies using high performance plastics and composites for metal replacement, from prototype to small and large volume.
